## Claims

---

What is claimed is:

1. A leg brace for a person, said leg brace being formed of a generally planar sheet of elastomeric material and having a pair of adjustment ends or tabs connected by interdigitating straps to a central body portion. The tab ends secured thereby, to said braces outer elastomeric fabric surface by means of Velcro fabric bell hook closures located at the inner surface of the tab ends.
2. The brace comprising a central portion and having a girth and height to support a calf, knee, thigh or other body part.
3. A brace whose interdigitating strap design allows for the rapid, secure deployment and fitting of the brace by simultaneously tensioning its two tab ends.
4. A brace that allows for the securing of same in registration with the patellae when used as a knee brace and biasing of the patella due to simultaneous tab tensioning.
5. A brace that allows for the support of the thigh or calf without patellar opening when used for same.
6. A brace who's adjustable girth allows it to fit of a wide range of sizes.
7. A brace whose design permits its use on either leg.
